IBM PS/2 Model 95

The IBM PS/2 Model 95 is a tower computer produced by IBM in the late 1980s and early 1990s. It was part of the IBM PS/2 series, which was IBM's successor to the original IBM PC. The Model 95 was a high-end model of the PS/2 series, featuring an Intel 80386 microprocessor running at 25 MHz, 2-16MB of RAM, 40-80MB hard drive and a base price of \$14,000. It also had a built-in 3.5-inch floppy drive and supported VGA graphics.

The Model 95 was compatible with IBM's PS/2 line of peripherals and ran on IBM's proprietary operating system, OS/2. It also had an optional math co-processor, and the ability to add an additional hard drive. The IBM PS/2 Model 95 was geared towards the business and professional market, it was known for its high performance and expandability.
