

Power Alarm Clock c. 1998

Computer collectibles are items related to the history and culture of computing that were sought after by enthusiasts, hobbyists, and collectors in the 1990s. They range from hardware and software to books and magazines, from posters and stickers to badges and pins, from games and toys to clothing and accessories. They retailed for various prices.

This alarm clock doubled as a calculator and was quite often given as premium “swag” for technology related conferences. It can display the date and time for 16 cities worldwide and has a selectable alarm tone. It runs on 3 AA batteries. Retail price is unknown.
