

Respiratory Protection Quiz

- 1. Employers first try to eliminate or reduce workplace breathing hazards by:**
 - a. Issuing respirators
 - b. Using engineering controls like ventilation
 - c. Issuing dust masks

- 2. You may need to wear a respirator if the air is contaminated or:**
 - a. Is too cold
 - b. Can't be vented outside
 - c. Has too little oxygen

- 3. You use an air-purifying or filtering respirator when:**
 - a. There's too little oxygen, but no air contaminants
 - b. The air is contaminated, but has enough oxygen
 - c. The situation is "Immediately Dangerous to Life or Health"

- 4. An air-supplying respirator uses:**
 - a. A tank or compressor to supply air
 - b. A canister that cleans air
 - c. Paper filters to clean air

- 5. Air-purifying and filtering respirators use labels or color coding to identify the:**
 - a. Respirator's manufacturer
 - b. Most recent inspection dates
 - c. Chemicals the respirator protects against

- 6. A respirator's fit must:**
 - a. Provide a good seal to keep contaminants out
 - b. Go easily over eyeglasses
 - c. Provide ventilation to let clean air in

- 7. Respirator fit testing is required only for people with glasses, beards, or other respirator fit problems.**
 - a. True b. False

- 8. You may not be able to use a respirator safely if you have respiratory problems or a heart condition.**
 - a. True b. False

- 9. When inspecting a respirator, you should report problems like:**
 - a. Deteriorated rubber or plastic parts
 - b. Fully charged oxygen tanks
 - c. Tight connections

- 10. Respirators should be stored in areas that are dust-free and:**
 - a. Warm and damp
 - b. Dry and neither very hot nor cold
 - c. Sunny and hot
